

St. Joseph Animal Services Animal Shelter Statistics

Asilomar Accords Statistics

The Asilomar accords data reporting method is a known industry standard format for reporting animal care data. St. Joseph Animal Control and Rescue utilizes the Asilomar Live Release Rate which shows what percentage of animals left the shelter with a live outcome. Live outcomes include adoptions, returned to owners, transferred to rescues, and trap-neutered-return.

The Live Release or Save Rate is the percentage of animals leaving the shelter alive no matter what their health or behavior status. This could be through adoption, return to owner or transfer. This measurement eliminates any subjective definition of 'adoptable'.

The Annual Live Release Rate is calculated by dividing total live outcomes (adoptions, outgoing transfers, and return to owner/guardian) by total outcomes (total live outcomes plus euthanasia not including owner/guardian requested euthanasia or died/lost in shelter/care).

2019

Total Live Dog Outcomes: 1645
Total Dog Outcomes: 1755
Save Rate: 94%

Total Live Cat Outcomes: 695
